Experiment 26

Aim

To insert a watermark into an image using OpenCV.

Procedure

1. Import the OpenCV library.
2. Read the input image using cv2.imread().
3. Define the watermark text.
4. Specify the position, font, size, color, and thickness of the watermark.
5. Use the cv2.putText() function to insert the watermark into the image.
6. Save the watermarked image using cv2.imwrite().
7. Display the watermarked image using cv2.imshow().
8. Close the image window using cv2.destroyAllWindows().

Code

```
import cv2
img = cv2.imread("input.jpg")
if img is None:
    print("Error: Image not found!")
else:
    watermark = "MY WATERMARK"
    position = (50, 50)
    font = cv2.FONT_HERSHEY_SIMPLEX
    font_scale = 1
    color = (255, 255, 255)
    thickness = 2
    cv2.putText(img, watermark, position, font,
                font_scale, color, thickness)
    cv2.imwrite("watermarked_image.jpg", img)
```

```
cv2.imshow("Watermarked Image", img)
cv2.waitKey(0)
cv2.destroyAllWindows()
```

Sample Input:

Output:

Result

The watermark "MY WATERMARK" was successfully inserted into the image using OpenCV
