

Activity - 2

1. Technique: Median Filter

Reason: It effectively removes Salt and Pepper noise while preserving image edges.

2. Technique: Gaussian Filter

Reason: It Smooths the image and reduces Gaussian noise caused by sensors.

3. Technique: Bilateral Filter

Reason: It removes noise while preserving important edges and fine details.

4. Technique: Gaussian Filter Median Filter

Reason: It ~~reduces~~ removes random black & white dots without affecting the text.

5. Technique: Gaussian Filter

Reason: It reduces grainy noise and smooths the image.

6. Technique: Histogram Equalization

Reason: It improves image contrast and makes objects more visible.

7. Technique: Contrast Stretching

Reason: It expands the intensity range, making the image brighter and clearer.

8. Technique: Adaptive Histogram Equalization (CLAHE)

Reason: It enhances local contrast, making internal structures more visible.

9. Technique: Histogram Equalization

Reason: It increases intensity variation and improves overall contrast.

10. Technique: Contrast Stretching

Reason: It spreads pixel values over the full intensity range, improving image quality.
